

**Aenix** enterprise for

# COZYETACK

Sovereign Cloud-in-a-Box

# COZYSTACK

CNCF Sandbox Project

● Banks

● AI Products

● Large Clouds

● SMB

● ISP

Our product line is built on Cozystack — an open-source CNCF Sandbox project maintained by the Ænix core team. Cozystack is a modern bare-metal cloud platform: **Kubernetes + DBaaS + S3 + VMs**. Works with any Linux distribution.

## Ænix Platform Editions

### Ænix Platform Public Cloud Edition

A multi-hypervisor cloud control plane with users, projects, quotas, cloud-like UX, and multi-region support. Integrates with third-party infrastructure and services. Built for large data centres and cloud providers launching or scaling public clouds.

### Ænix Platform Enterprise Edition

A private and hybrid sovereign cloud for banks — secure, automated, and easy to extend. Built for multi-DC setups, compliance, and enterprise integrations. One control plane that can connect to VMware, OpenNebula, OpenShift, and more. Education and training.

### Ænix Platform IDP Edition

An Internal Developer Platform layer on top: GitLab automation, Argo CD workflows, and APIs — so your engineers spend less time on routine work.

### Ænix Platform AI/ML Edition

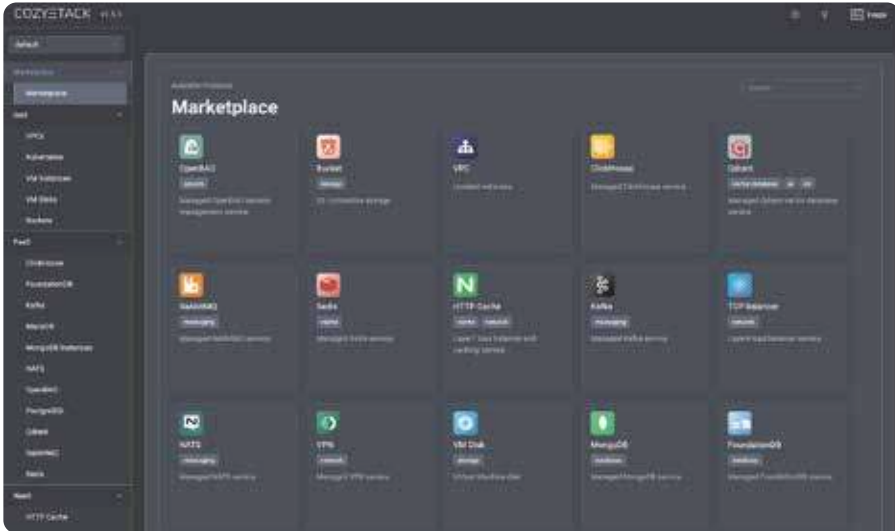

AI platform automation out of the box: standard AI workloads, service APIs, and ready-to-use blueprints, DBs, apps and models — from idea to running jobs faster.

### Pure Cozystack with Ænix Support

The cloud experience on your own or leased servers (Hetzner, etc). Reduce AWS-level bills by 2–7x without giving up reliability or convenience. Go live and migrate from public clouds in 1-2 weeks. Perfect for product teams who don't want to worry about infrastructure — but are tired of public cloud bills.

# Aenix Platform ISP Edition

A modern alternative to OpenStack built for small and mid-size hosting and cloud providers, MSP, data centres.

## What's included

### Enterprise support

and proprietary modules  
from **€1.3k / month**.

### WHMCS integration

and templates for your  
own hosting panel.

### Fast feature delivery

without the hassle of long  
wait times.

### Migration expertise

from proprietary solutions like  
VMware, Openstack, Virtuozzo, etc.

### Billing module

that tracks and stores full  
usage data with a clear API.

### Tenant lock / suspension

for automatic suspension or  
blocking of user resources.

# Join our Partner Program
